

Just a quick, simple how to for those who aren't too mechanically minded.

This is based on the D8 V6 coupe, mine to be honest 🙄 . This won't differ too much depending on which engine you have in your coupe 🙄 .

Engine bay shot:

Power steering, coolant & washer fluid reservoirs:

Brake fluid reservoir:

Brake fluid  
reservoir

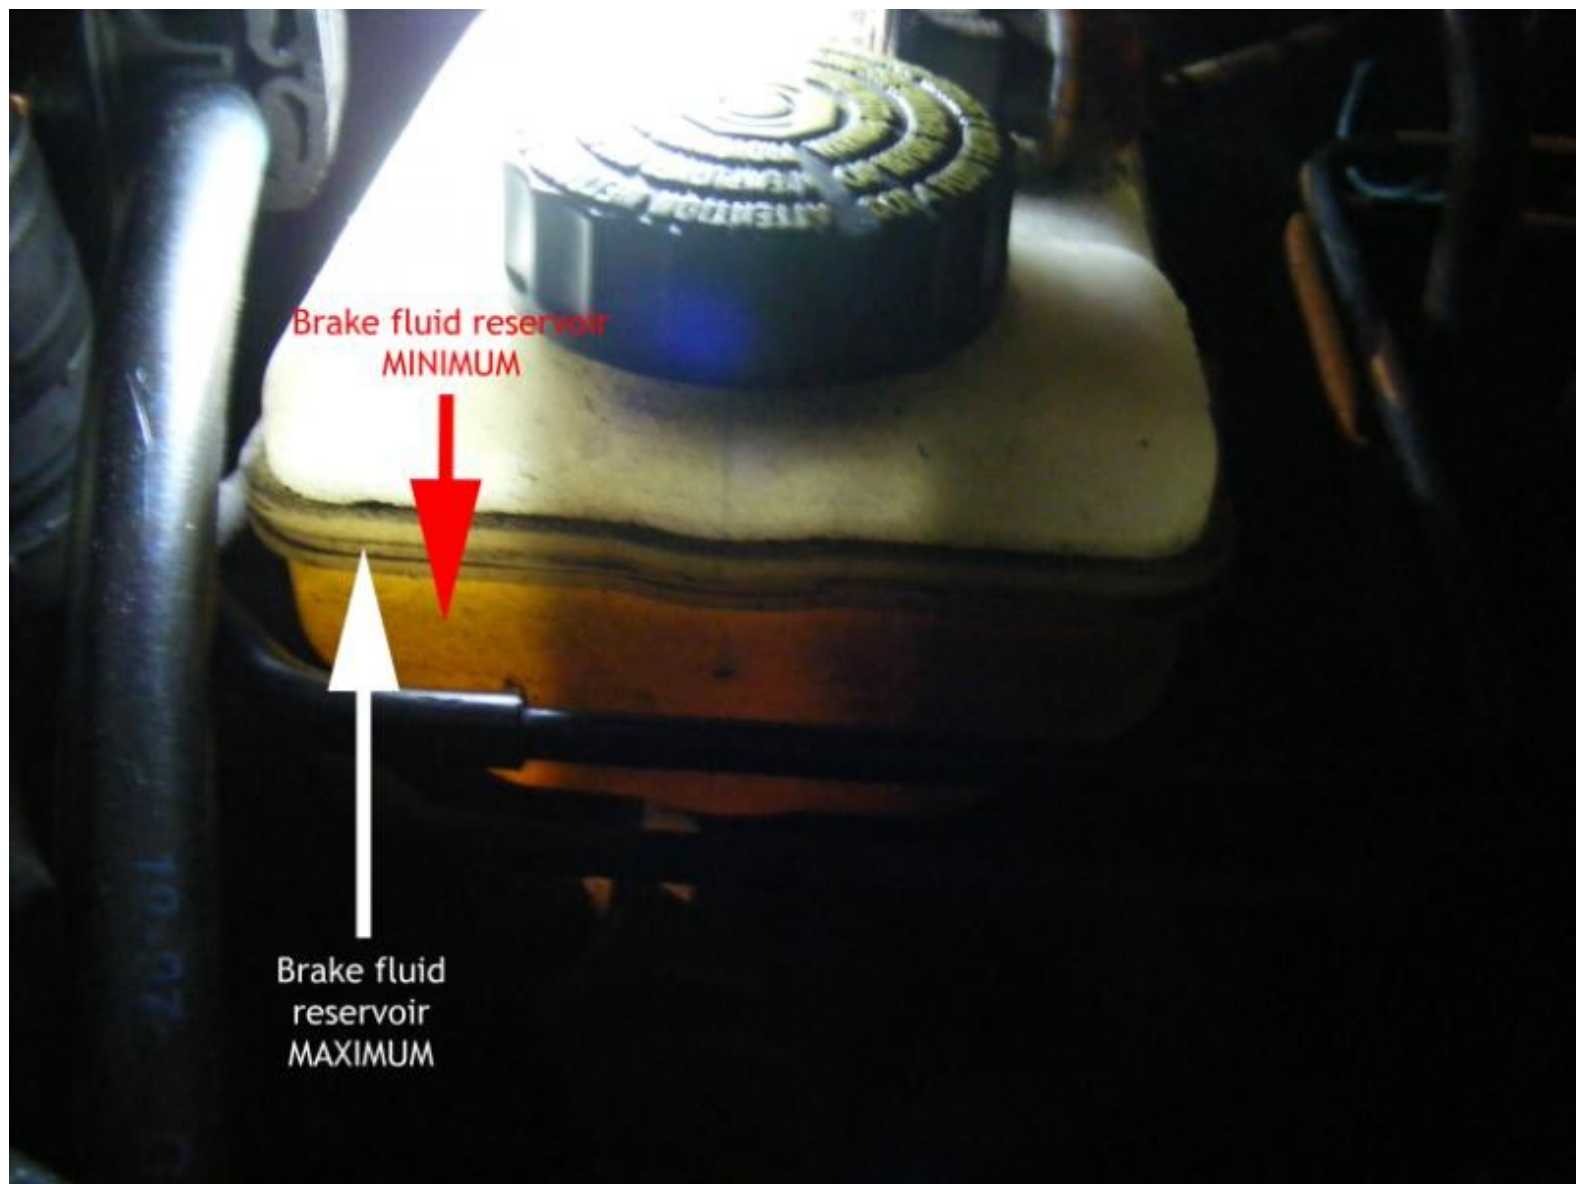

Power steering reservoir MIN & MAX mark: (best to check after turning the engine off & not moving the steering wheel)

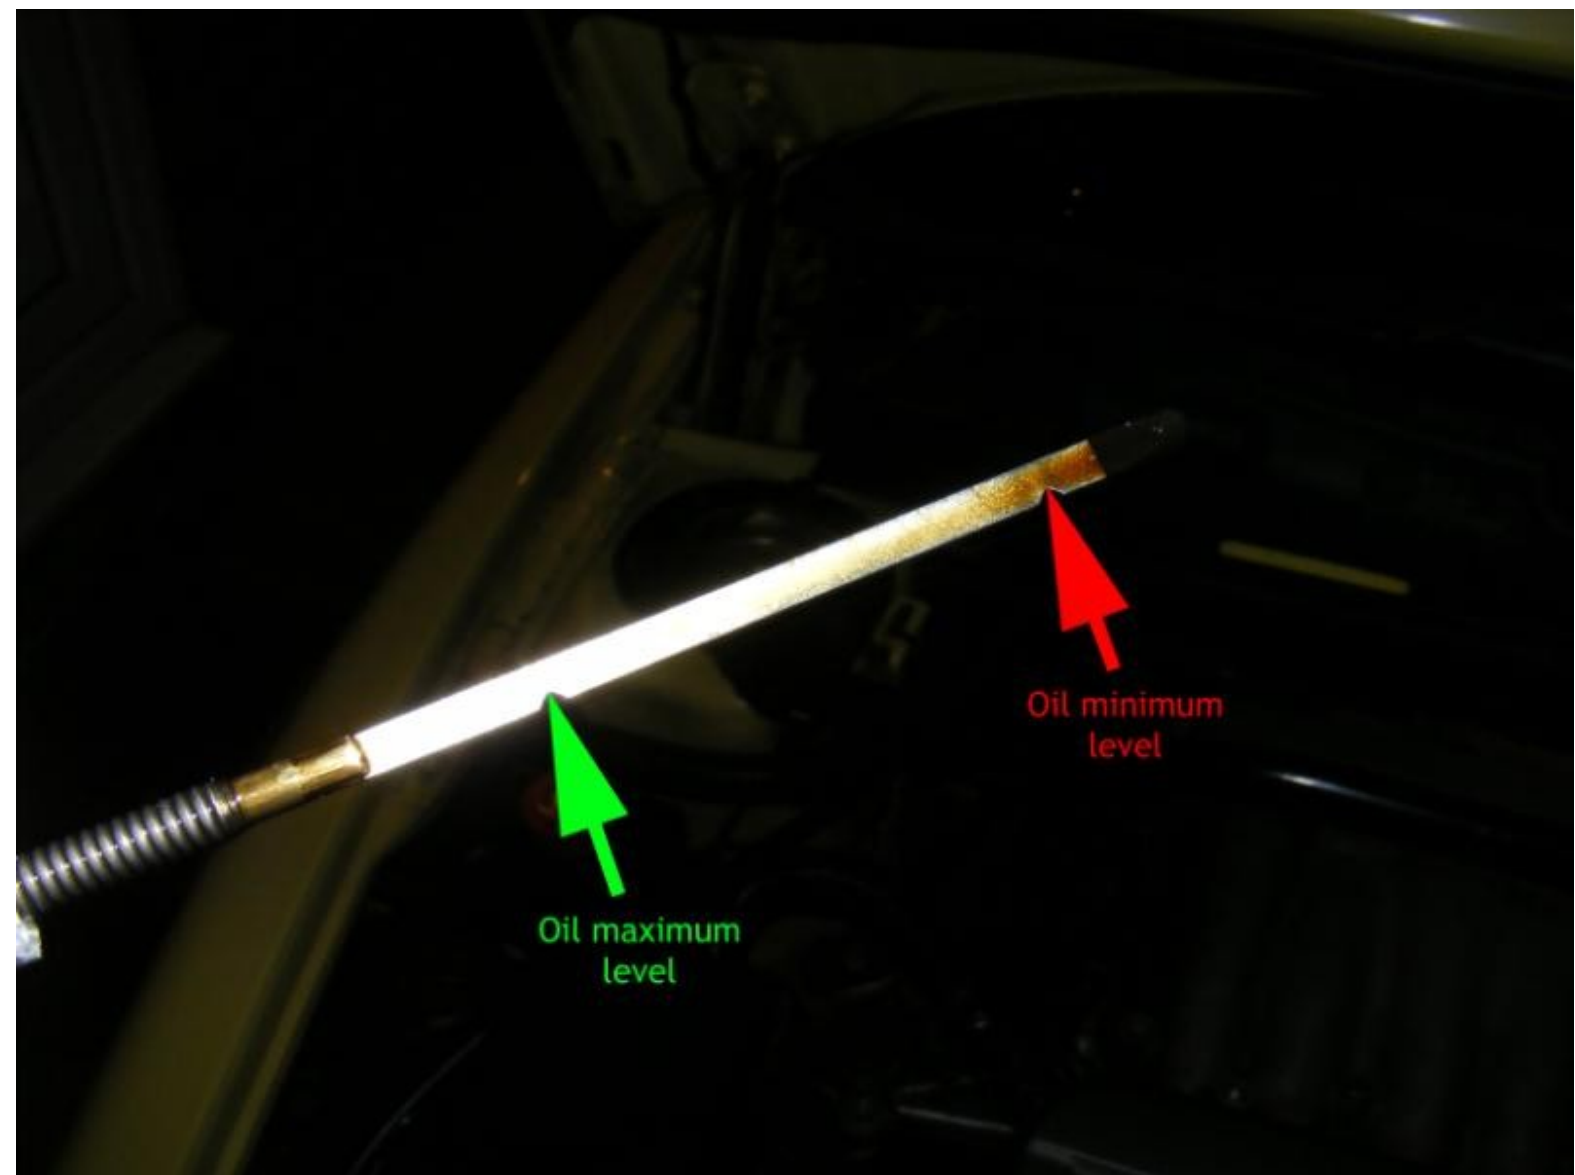

Coolant level: (mine is spot on)

Brake fluid reservoir: (markings are rough)

Minimum & Maximum mark on the dipstick: (Mine is on max despite the flash making it look otherwise)

Best to do your checks weekly, you may spot something that could save you money!
